

## Web Vulnerability Scanner Comparison Table

Below is a Web Vulnerability Scanner Comparison Table between Acunetix WVS, IBM AppScan and HP WebInspect.

|   | Acunetix<br>WVS | IBM<br>AppScan | HP<br>WebInspect |
|---|-----------------|----------------|------------------|
| Price (starts from)                                 | \$1,445         | \$5,000        | \$25,000         |
| Single product dedicated company                    | ✓               | ✗              | ✗                |
| Generic software and vulnerability database updates | ✓               | ✓              | ✓                |
| <b>Tools</b>  |                 |                |                  |
| Reporter  | ✓               | ✓              | ✓                |
| Scheduler   | ✓               | ✓              | ✓                |
| HTTP Editor   | ✓               | ✓              | ✓                |
| HTTP Sniffer  | ✓               | ✓              | ✓                |
| HTTP Fuzzer   | ✓               | ✗              | ✓                |
| Port Scanner  | ✓               | ✗              | ✗                |
| Vulnerability Editor                                | ✓               | ✗              | ✓                |
| Blind SQL Injector                                  | ✓               | ✗              | ✗                |
| AcuSensor Technology                                | ✓               | ✗              | ✗                |
| Encode / Decode Tools                               | ✓               | ✓              | ✓                |
| Authentication Tester (brute force)                 | ✓               | ✓              | ✓                |
| Subdomain Scanner (DNS discovery Tool)              | ✓               | ✗              | ✗                |
| Network Alerts (security network services checks)   | ✓               | ✗              | ✗                |
| Results Comparer (Ability to compare scan results)  | ✓               | ✗              | ✗                |
| Web Service Scanner and Editor                      | ✓               | ✓              | ✗                |
| <b>Functionality</b>                                |                 |                |                  |
| Scan Wizard   | ✓               | ✓              | ✓                |
| File extension Filter                               | ✓               | ✓              | ✓                |
| Allowed Hosts Filter                                | ✓               | ✓              | ✓                |
| Real time results view                              | ✓               | ✓              | ✓                |
| URL Rewrite configuration                           | ✓               | ✓              | ✓                |
| Exclude Parameters Option                           | ✓               | ✓              | ✓                |
| Predefined Scanning Profiles                        | ✓               | ✓              | ✓                |
| Generate Compliance Reports                         | ✓               | ✓              | ✓                |
| Record Authentication Sequence                      | ✓               | ✓              | ✓                |
| Scan a website from a saved Crawl                   | ✓               | ✗              | ✗                |
| Scan sites from a saved list of Sites               | ✓               | ✗              | ✓                |
| Mark Vulnerabilities as False Positives             | ✓               | ✓              | ✓                |
| Google hacking database checks (GHDB)               | ✓               | ✗              | ✗                |
| Web Server software and version detection           | ✓               | ✓              | ✓                |
| Detects or option to specify custom 404 error pages | ✓               | ✓              | ✓                |
| Export Reports to PDF, HTML, Doc, Text, BMP         | ✓               | Not all        | Not all          |
| <b>Configurable Functionality Options</b>           |                 |                |                  |
| Submit Forms Automatically                          | ✓               | ✓              | ✓                |
| Fetch anything above start directory                | ✓               | ✗              | Not optional     |
| Fetch directory indexes even if not linked          | ✓               | ✗              | ✗                |
| Case Sensitive request and response Handling        | ✓               | ✓              | ✓                |
| Retrieve and process robots.txt and sitemap.xml     | ✓               | ✓              | ✓                |
