# WHAT'S NEW IN ACUNETIX WEB VULNERABILITY SCANNER 10

It can be difficult to know where to begin with the new version of the Acunetix Web Vulnerability Scanner tool. There are so many enhancements to existing tools and features, as well as the addition of a few new ones, it may be easy to feel overwhelmed. These new features and enhancements to existing tools are a major benefit for organizations concerned about network security, as long as you know what they are and how to use them.

## Acunetix Login Sequence Recorder

One of the newest features is the Acunetix Login Sequence Recorder. This feature is useful in automatically testing password protected areas of a website. It's also easy to use, requiring as few as three steps to utilize it's key functions. Once you turn the Login Sequence Recorder on it will begin recording all of your actions. The scanner can replay any actions you take while it is recording, and once the login actions are complete you only need to click 'Next'.

Step two involves defining specific restrictions, preventing the scanner from performing certain actions you don't want it to take. This includes 'Logout', 'Delete User', 'Send Email', and other options you don't want to interact with. Finally, use the 'Session Pattern' to let the scanner know when it is

logged in and out. Once these three steps are complete, save the Login Sequence file and it's ready to go.

## Automatic Detection of Malware and Phishing Attacks

The Acunetix Vulnerability Scanner includes a malware detection service that is able to detect URLs linking to shady or otherwise questionable websites. Detected sites may have a reputation for hosting malware or be used for phishing attacks. If the scanner picks up on these websites it will alert users to the dangers of visiting it.

## Get the Most Out of Acunetix With Network Security Specialists

Working with a trusted network security specialist like Alliance Technology Partners can only enhance your experience using the latest version of Acunetix Web Vulnerability Scanner. With so many new tools and features, it makes sense to lean on the expertise of network security experts who are trained and certified with Acunetix. Alliance can help your organization truly maximize the benefits of the Acunetix Web Vulnerability Scanner and keep networks protected to the max.
